TrueID

Server-Based LiveScan Solution

Connecting agencies, officers, and justice systems

BUILT FOR AGENCIES. POWERED FOR PUBLIC SAFETY.

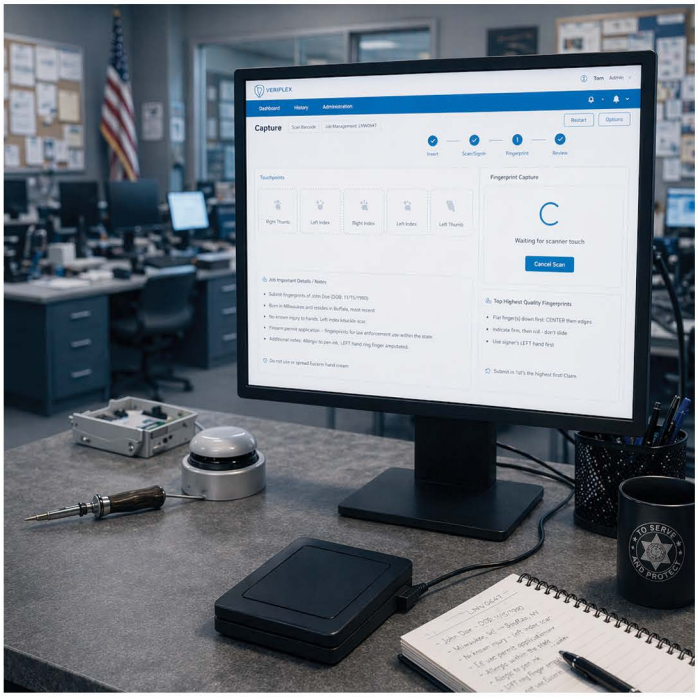
A modern, scalable alternative to traditional LiveScan systems

A SMARTER, SCALABLE ALTERNATIVE TO TRADITIONAL LIVESCAN

Traditional LiveScan systems lock agencies into proprietary hardware, fixed device counts, and per-unit cost structures that grow with every deployment. TrueID breaks that model — delivering a centrally managed, hardware-flexible platform that gives agencies the control, scalability, and cost efficiency that modern public safety demands.

FBI CERTIFIED

Enterpol TrueID is designed to reduce costs, increase agency control, and meet the demands of today's criminal justice environment. The FBI has certified that this product meets specifications listed in Appendix F of the FBI's Next Generation Identification Systems Image Quality Specifications. This ensures agencies receive a fully compliant, field-ready platform from day one.



Integrator of Integrated Biometrics

A Smarter Approach to Biometric Identification

TrueID redefines how agencies capture, manage, and scale biometric identification. Its centralized, server-based architecture delivers flexibility, control, and cost efficiency without the limitations of traditional systems.

- **Built for mobile and traditional environments** equally effective for field cite-and-release operations and fixed jail booking workflows.
- **Agency-controlled deployment** TrueID can be hosted on-premises or delivered as cloud-based Software as a Service (SaaS).
- **Volume-based pricing advantage** the more scanners added, the lower the overall cost per device — the system rewards growth.
- **Significant cost savings** compared to traditional LiveScan systems, with a lower total cost of ownership over time.
- **Addresses the "Cite and Release" challenge** officers can capture biometric data in the field, eliminating the identification gap.
- **Scanners are interchangeable** between users, reducing spare equipment costs and simplifying device management.
- **Multiple fingerprint card formats** supported within a single platform, including rapid identification — all from the same scanner.
- **Centralized management** updates, patches, and security configurations are applied at the server level.
- **Reduced IT burden** eliminates the need for dedicated IT staff at each site, a critical advantage for smaller agencies.
- **CJIS compliance support** Server-based architecture simplifies FBI CJIS Security Policy compliance.
- **National retail partner** provides access to FBI-certified scanners through a national distribution network.
- **Patented Light Emitting Sensor (LES)** allows scanners to operate in direct sunlight, where traditional optical scanners cannot.
